RE: QMI Hurricane-Security Screen Care and Maintenance.

Use a mild degreaser such as Formula 409 to clean the frame and snap cover. Never use bleach or chlorine on the black stainless mesh. To clean the powder coated black mesh, use mild dishwashing detergent or PB Blaster-which can be found at your hardware store.

For egress screens, the hinges should first be cleaned per above and then a silicone-based spray lubricant such as “Blaster” Silicone Spray Lubricant (Found in hardware stores right next to PB Blaster) may be applied to the hinge areas. Do not use oil based or WD-40 lubricants as they will accumulate dust and dirt.
