

## T20 LOW VOLTAGE TUBULAR MOTOR

Ozroll is pleased to announce the availability of the **T20 Low Voltage Tubular Motor**.

The T20 tubular motor has been specifically designed to suit the current OzRoll Drive System (ODS) operating systems and is completely compatible with both our Standard and RF controllers.

With a lifting capacity equal to 20Nm and the ability to fit into a smaller head box the T20 tubular motor has double the capacity of our existing L10 mech with all the benefits of a low voltage system.

A Smarter and Safer alternative that will still function during a power blackout and does not require the services of an electrician.

Installation is quick and simple and the T20 has mechanical limit settings with a nominal speed of 16RPM.

Drive Wheel Kits are available to suit both the 50mm round and 60mm Octagonal axles.

Consider the advantages:

- 12v operation - Safe and Simple
- Do not require the need for a licenced electrician - Cost Saving
- Lifting Capacity equal to 20Nm - Refer chart below
- Nominal speed 16RPM
- Mechanical Limit Settings
- Built in overload protection through the controller
- Ideal Battery Back Up system
- Suits smaller head box sizes

*Compatible with the E-Port  
18650 RF Control*

THE SMARTER AND SAFER ALTERNATIVE.....
